**PROSPERITY & SUMP_s-UP: Quality
assessment**

Quality assessment of SUMP_s/SUMF_s in the Czech Republic

Michal Ulrich, Ministry of Transport of the Czech Republic

General context, methodology

- SUMP – from the point of view of the Ministry of Transport (MoT) - complex, strategical document, preparation quite time-demanding
- SUMF (Sustainable urban mobility framework) – first part of SUMP with emphasis on the public transport, sufficient for the substantiation of projects cofinanced from ESIF
- Principal methodological document: Guidelines for the preparation of the SUMPs of the cities in the CR

Reasons for SUMP/SUMF creation

- Main reason – need for the transport problems solution in a strategical and comprehensive way
- For cities above 50.000 inhabitants: substantiation of the projects cofinanced from ESIF (selected interventions)
- Binding for the OPT (+IROP) projects submitted in the calls for proposal published after 2017 (minimal requirement is the SUMF level)
- This condition is a result of the negotiation with the EC

Committee for assessing SUMP

- Committee for assessing the SUMP – verification of compliance of submitted SUMP (+SUMFs) with main points of the Guidelines
- Established by the First Deputy Minister
- 7 members, the chairman is the Director of Strategy Department, other members – MoT, Ministry of Regional development, Transport Research Centre, academical sector
- Assessment in accordance with the Rules of procedure

Criteria for SUMP assessment

- The scope of the included area
- The principle of partnership
- The usage of transport model
- The compliance with main strategical documents (at city, state and EU level)
- The quality of the analysis of the main transport problems in the city including wider context

Criteria for SUMP assessment (2)

- The identification of the main objectives including the layed down scenarios
- The identification of financial plan including operational costs and investments

Outputs

- The output of the Committee for assessing the SUMPs is not only the verification of the SUMP/SUMF but also recommendations for further development of the documents
- **Actual result: 8 SUMP/SUMF assessed, out of which 2 SUMPs + 5 SUMFs verified**

**5th European Conference on
