[CIVITAS SUMP-UP Publications](#)

### **Body:**

CIVITAS SUMP-UP has released French, Hungarian and Spanish versions of four of its key publications.

Mobility practitioners working in these languages can now make use of three manuals on SUMP measure selection and report on developing a SUMP action plan.

The three manuals provide guidance on identifying appropriate SUMP measures, along with how to enhance selected mobility fields.

Each manual is tailored to a specific city profile, with beginner, intermediate and advanced SUMP cities covered. They also contain recommendations, rating systems for priorities of measures, and checklists tailored to each city type.

The report gives guidance on how to go about approaching a crucial step in the SUMP process; the development of a SUMP action plan.

It sets out responsibilities, resources, stakeholder coordination, time plans, and funding sources; breaks down action plan development into a six-step process (with the final stage an implementation plan); provides examples of action plan templates and best practice; and contains a user manual.
