[Preparatory Action — User-friendly Information Tool on Urban and Regional Vehicle Access Regulation Schemes](#)

**Body:**

In light of the rapid development of UVARs in the EU, an information tool is considered by the European Parliament to be a useful instrument for people travelling within the EU.

Consequently, DG MOVE has announced a new preparatory action with the general objective to **foster the real-time information of road users about urban and regional access schemes.**

The specific objective of this tender is to:

- Carry out a pilot project focusing on enabling road users, in particular motorists (i.e. both professional and non-professional drivers) to be fully informed about urban and regional access schemes.

This also includes:

- Working on the enablers required for the system to work, i.e. standardisation and data provision for the integration of the information in tools such as apps or navigation devices.
- Facilitation of the generation of the information necessary to comply with the single digital gateway regulation.

The geographical scope of this pilot shall include at least 4 member states covering around 80% of existing UV.

For more information, including the specific tender specifications, visit [here](#).
