Eyes on Earth: the use of satellite data in urban mobility

Subtitle:
Copernicus Earth observation roadshow

Wednesday 12 June 2019 at 09:30 Thursday 13 June 2019 at 17:30
Darmstadt,
Past event

Information / Description:

The world we live in requires us to have our eyes open at all times – and focused on Earth – so that we can leave the best possible planet for the future generations.

For this reason, as part of its “Copernicus Earth Observation” programme, EASME and the European Commission have launched the Eyes on Earth’ Roadshow – a series of five events across the EU bringing space and Earth observation closer to EU citizens; and raising awareness of the skills and job opportunities in the geospatial industry.

The first of such Roadshows will take place at EUMETSAT’s premises in Darmstadt, Germany, on 12-13 June.

During two exciting and eventful days, more than 200 visitors will take part in the Roadshow activities, ranging from game-like experiences at the Expo area, the Masterclasses/Training Opportunities on urban planning - including transport and mobility.

All in all, participants from all ages will get a first-hand experience of geospatial observation and its possibilities in the urban environment.
