Information / Description:

The EU-funded [SOLUTIONS project](#) is launching a series of free webinars that will help urban mobility professionals gain knowledge on how to make transport in cities more sustainable.

The five webinars, which will run for one month between November and December, will be presented by SOLUTIONS urban mobility experts and range from topics such as the transportation of goods to Sustainable Urban Mobility Plans (SUMPs).

The first webinar is on Tuesday 3 November and focuses on city logistics and improving the overall efficiency of goods deliveries in cities (register [here](#)). The second, on Friday 13 November, will introduce electric vehicles and offer guidance on how to increase their use in urban environments (register [here](#)).

An urban mobility expert will offer an overview of the SUMP concept for the third webinar on Wednesday 18 November, with further group discussion focused on case examples and transferability to a variety of local context conditions (register [here](#)).

The fourth, on Thursday 3 December, will concentrate on sustainable public transport, focusing particularly on bus rapid transit and clean vehicles (register [here](#)); while the final webinar on Friday 8 December will be on light electric vehicles, discussing what they can do for, and how they can be integrated into, urban transport (register [here](#)).

Visit the SOLUTIONS website to learn more about [the webinars](#) and [the project](#).
