LEVITATE Webinar: The impacts of automation in urban transport

Thursday 11 June 2020, 10:00 to 11:30

Information / Description:

The aim of the LEVITATE project is to prepare a new impact assessment framework to enable policymakers to manage the introduction of connected and automated transport systems, maximise the benefits and utilise the technologies to achieve societal objectives.

Urban mobility is going through unprecedented changes during these weeks. Cities are facing challenges which require unique solutions in no time due to the COVID-19 crisis. In addition to these, local mobility strategies for longer terms must be reviewed and adapted to the new normal. Will connected and automated technologies play a more substantial role in urban mobility? How can we predict their impacts on urban mobility?

Join this webinar and listen to LEVITATE partners and city representatives, who are eager to share their views with you.

The webinar will take place on 11 June 2020 at 10:00 CEST.
