Webinar— LOW-CARB tools to support your SUMP process: The SUMP Self-Assessment Tool and the GIS SUMP Monitoring Tool.

Monday 30 March 2020, 14:00 to 15:30

Information / Description:

A webinar to acquaint participants with two Sustainable Urban Mobility Planning tools developed during the LOW-CARB project.

1) The SUMP Self-Assessment (co-developed with CIVITAS SUMPs-Up) is a specially designed survey for local authorities and practitioners to assess how closely their strategic mobility plan is related to SUMP approaches, be it a well-established SUMP or the beginnings of one. The results of which provided tailored guidance, resources and suggestions unique to each region’s mobility situation and needs. An assessment on the quality of a strategic mobility plan AND an evaluation of planning activities can be deduced.

2) The GIS SUMP Monitoring Tool (developed by City of Brno) helps local authorities and practitioners better coordinate and realize a Sustainable Urban Mobility Plan as well as the action plans’ measures. It is a tool that has been designed to assist with the organisation of stakeholders and their respective responsibilities and action points of SUMP development and implementation. It focuses on two key areas: the expenditure of time and budget across various measures.

This webinar is a part of a series being run for the LOW-CARB Follower City Program. A structured programme of trainings, pilot launches, and webinars to help boost cities’ awareness, knowledge, and expertise of low carbon mobility (especially in the Central European context). Please join our follower cities in thought-provoking and hands-on trainings and events that apply the teachings of LOW CARB’s lessons. Contact: s.govender@rupprecht-consult.eu for more info.
