Past event

Information / Description:

The time has come to highlight the emergence of electric vehicle (EV) infrastructure developments in Central and Eastern Europe (CEE) and take advantage of the lessons learned and knowledge gained so far around the world to help officials in CEE make the most informed decisions going forward when planning their EV networks.

The conference will feature companies, associations, policymakers, and regulators from CEE, as well as OEMs, infrastructure operators, and officials from the EU. They will come together to share their insights, experiences, and technology and investment plans for the region. Broad themes will be:

- Charging Infrastructure;
- Electric Vehicles;
- EV Customers;
- Policy, Public Investment, and Regulation;
- The Municipal Role in EV Infrastructure.

Day 1 of the conference will focus on private sector actors and technologies.

Day 3 will be directed specifically at municipal officials in CEE interested in developing an electric vehicle system in their community, and help them think about the considerations involved in doing so. The goal of day 3 is that these officials leave the conference with the knowledge they need to begin realistically planning the EV system and infrastructure for their community.
