

[NODES toolbox](#)

Interchanges play a key role in the integration of the urban mobility system and in enabling good intermodal solutions. Their efficiency and sustainability is therefore essential to achieve sustainable transport objectives in Europe.

The NODES project has compiled [a toolbox](#) to support European cities in the design and operation of new or upgraded interchanges, as a way to provide greater support, services and satisfaction to the travelers and users, as well as to interchange operators and those societal and economic actors depending on the efficiency of interchange operations.

The toolbox is a catalogue of integrated planning, design and management tools, based on the most advanced practices in urban and other related transport sectors. It allows practitioners to assess and benchmark their new or upgraded interchange and to improve performances.

Visit nodes-interchanges.eu to access the toolbox.
