

[Planning and implementing innovative measures](#)

The NICHES+ project developed twelve practitioner manuals innovative measures for making urban transport more efficient and sustainable. The manuals aim to make these measures mainstream urban transport approaches in Europe.

The measures are included under four broad themes - transport accessibility, planning and use of interchanges, traffic management, and automated and space-efficient vehicles. The manuals explain how to implement such schemes, the costs that will be incurred, the benefits of the measures and which stakeholders to involve.

See below to download the manuals.
