[SUMP Measure Selection Kit](#)

Measure selection

Selecting the most effective
packages of measures for
Sustainable Urban Mobility Plans

Funded by the Intelligent Energy Europe
Programme of the European Union

The Measure Selection Kit provides guidance on identifying the most appropriate packages of measures to meet a city's policy objectives.

It explores the current understanding of measure selection in transport planning and its challenges, and suggests practical approaches to tackling them.

The Measure Selection Kit consists of the following components:

- Quick facts brochure: a concise summary of reasons for measure selection and approaches to identify cost-effective measures, projects and packages
- Measure Selection Manual: a comprehensive handbook providing detailed explanation of the measure selection challenges and practical recommendations for how these can be overcome
- Online learning course: an interactive e-learning course inviting interested mobility practitioners to learn more about measure selection at their own pace and from anywhere in the world. The e-learning course can be taken at the [Mobility Academy](#).

The Measure Selection Kit has been developed in the [CH4ALLENGE project](#), which is co-funded by the European Commission's Intelligent Energy Europe Programme and has the overall aim to facilitate the take-up of SUMP's throughout Europe.

To download the materials, see below. For more information on the CH4ALLENGE project, visit sump-challenges.eu.
