SMART MOBILITY
2019 - 2025

The Amsterdam Approach to shape mobility of the future

City of Amsterdam
CTO Innovation Team
Diederik Basta
Projectmanager eHUBS

1-10-2020
Amsterdam in 2040 when we do not act

- The city is growing
- Increase in mobility
- Pressure on public space
- Air pollution
- New forms of (micro) mobility
Project objectives: eHUBS will demonstrate that shared and electric shared mobility (e-bikes, e-scooters, e-cargobikes, and electric cars) are affordable and attractive alternatives to private cars. eHUBS will contribute to less emissions, less car use, and to the critical mass needed for the business case of electric and shared mobility.
The Amsterdam approach
